Full-Service Solutions— with a Single Point of Contact

At Dynalectric Company (Florida), “concept-to-completion” is literally built into the job. As a full-service provider, we offer complete expert engineering and design-build capabilities.

Design-build provides customers with a single point of contact for all phases of a project—from estimation and pre-construction to engineering, construction, and finally post-construction.

Total Responsibility from Start to Finish

By combining our engineers’ knowledge and experience with our advanced computer-aided design (CAD) technology and professional construction management, we take full responsibility for your project.

This means we can resolve constructability issues before they become expenses, and effectively monitor design and construction quality. We can also control costs and schedules, reduce administrative burdens, and improve risk management.

Design-Build Benefits:

- » Continuous control of project costs
- » Continuous value engineering with owner input and real-time cost data
- » Fully coordinated project from design through construction
- » Intimate knowledge of systems and components from field experience allows for the use of innovation and state-of-the-art systems
- » Concurrent design and construction to facilitate accelerated schedules
- » Knowledge of local building codes can help minimize delays and costs and improve response time
- » Having a single source responsible for the design, installation, and operation of systems, warranty and service, allows us to offer a complete, one-stop-shop solution
